Canceled or Withdrawn claims: 1-34.**Amended claims: none.****New claims: none.****Pending claims are listed as follows:****1.-34. (Canceled)**

35. (ORIGINAL) A media player comprising software code that is configured to:

provide a base rendering object associated with a rendering area in which multiple different media types can be rendered, the rendering area providing at least a portion of a media player user interface that can be viewed by a user;

provide multiple different media type rendering objects each of which being associated with a different media type that can be rendered in the rendering area, the different media type rendering objects being configured to render their associated media and sharing common properties;

receive media associated with a media type for rendering in the rendering area;

1 call the base rendering object with the media type associated with
2 the received media;
3 ascertain, with the base rendering object, an associated media type
4 rendering object that is configured to render that media type;
5 call the associated media type rendering object with the base
6 rendering object;
7 instruct the associated media type rendering object to render the
8 received media in the rendering area; and
9 render the associated media in the rendering area with the media
10 type rendering object.

11
12 36. (ORIGINAL) The media player of claim 35, wherein the
13 different media types can comprises one or more of: audio types, video
14 types, animation types, skin types, and HTML types.
